

Your Success Story

TELL US ABOUT YOUR SUCCESS

Many patients notice an improvement in school performance, work performance, or sports along with changes in personality and attitude. Would you share your experience of how vision therapy helped you?

Carter is our third child who has received vision therapy with Dr. Myers and his staff. Carter had many obstacles he has overcome to become a independent reader and successful student. however with guidance & support of his vision therapist he was able to improve his focusing & convergence, which allowed him to see & track print much more efficiently. Carter's reading accuracy, rate & fluency have greatly improved and he is now reading on grade level! Carter's understanding of direction & position has improved as well. His number of visual reversals has decreased and with attention given to his handwriting skills, his letter formation & spacing has improved significantly. While I am very happy with the improvements that relate to improved academic performance what gives me the greatest joy and satisfaction @ a mother is seeing my son happy again. Carter's self-esteem & self-confidence have greatly improved. I believe none of this would have been possible without the benefits he received through completing vision therapy.

May we share your story? Yes No

Would you recommend vision therapy to others? Yes No
